

Flooring Types

In order to provide the highest quality product, **Providential Products** generally uses three types of flooring: 3/4" Solid Plank, 5/8" Engineered Plank, and 1/2" Solid Plank. Our products are moisture cured and fumigated multiple times to ensure quality, stability, and longevity.

A traditional type of flooring that has been used for hundreds of years is 3/4" solid. It has a 1/4" wear layer for future sanding and refinishing.

3/4" Solid Plank

Providential Products uses only the finest in Engineered flooring. Engineered with a Baltic Birch core resulting in a 4mm wear layer for 5/8" and a 6mm wear layer for 3/4". With the right quality, Engineered flooring is superior to solid plank. It has virtually the same wear layer but is much more resistant to cupping and warping, and it utilizes fewer natural resources (i.e. trees).

5/8" Engineered Plank

Essentially the same as 3/4" Solid Plank but is only 1/2" in total thickness. This means that the wear layer is reduced to 5/16". This type of flooring is usually used when thickness is an issue on a project.

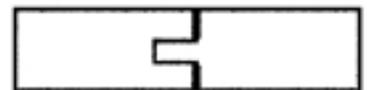

1/2" Solid Plank

Edge Types

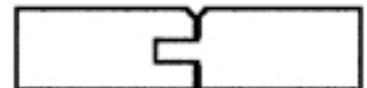

Square edge flooring will blend the boards together and the overall look is more formal.

Square Edge

Eased or micro beveled edge floors will define each board relaxing the appearance. Even so, eased edge floors are often chosen for contemporary homes.

Micro Radius Edge

Beveled edge floors have a very distinctive groove that forms when two boards are installed side-by-side. Generally, these floors lend themselves to an informal, country, rustic or old world decor.

Beveled Edge

Wood Species

The species of wood floor is up to you. There are many species that are available in different colors, grain-types, and degree of hardness. Contact **Providential Products** to speak with a showroom representative to determine what species of wood is best for your home or business.
